s is a 'working draft' sequence. It currently of 10 contigs. The true order of the pieces own and their order in this sequence record is Gaps between the contigs are represented as , but the exact sizes of the gaps are unknown. It will be updated with the finished sequence it is available and the accession number will ved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    22-MAR. 2000) Human Genome Sequencing Center, Department and Human Genetics, Baylor College of Medicine, One 1, Houston, TX 77030, USA 1011 this sequence version replaced gi:13877178.

                                                                                                                                                                                                                                                                                                                                                                                                                             NOTE: Estimated insert size may differ from sequence length (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html). NOTE: This is a "working draft' sequence. It currently consists of 13 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

The present invention relates to the isolation of a novel human G-protein coupled receptor (GPCR) which is related to the chemokine receptor subfamily. The CDNA and gene sequences encoding for GPCR are also given in the invention. The sequences of the invention are useful for diagnosing and treating diseases or conditions mediated by human for diagnosing and treating diseases or conditions mediated by human cereptor diseases. Such diseases include hyperpoliferative disorders (e.g. hyperplasia), neurological disorders (e.g. parkinson's disease), psychiatric diseases (e.g. schizophrenia), inflammatory disorders (e.g. adult respiratory distress syndrome, ARDS). The GPCR protein is also useful for identifying distress syndrome, ARDS). The GPCR protein is also serves as a target for identifying agents for use in mammalian therapeutic applications, cerify a human drug, particularly modulating a biological or pathological response in a cell or tissue that expresses the protein, in biological ceptor subfamily, in drug screening assays and in competition binding assays. GPCR is also useful in diagnosing a disease or predisposition to a disease mediated by the peptide, in pharmacognomic analysis. The copynucleotide sequences can also be used in gene therapy. The present sequence encodes for the novel human GPCR of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    hRUP19 The endogenous and non-endogenous, constitutively activated versions of human G-protein coupled receptors (GPCR), are useful for direct identification of candidate compounds as receptor agonists, inverse agonists or partial agonists having applicability as therapeutic squares for treating diseases related to GPCR, e.g. lung cancer. Non-endogenous version of human GPCRs are also utilized in research settings and in vitro and in vivo system, incorporating GPCRs can be utilised to elucidate and understand the roles these receptors
                                                                                                                                                                                                                                                                                                                                                                Endogenous and non-endogenous versions of human G-protein coupled receptors for direct identification of candidate compounds as agonists, inverse agonists or partial agonists for use as therapeutic agents -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        240
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         240

                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present invention relates to novel G protein-coupled receptors (nGPCRx; where x is 1, 3, 4, 5, 9, 11, 12, 14-18, 20, 21, 22, 24, 27, 28, 31-38, 40, 41, 53-60) and their coding sequences. The present c sequence is the coding sequence for one such G protein-coupled receptor. GPCRs are also known as seven transmembrane receptors and function in signal transduction. The nGPCRx coding sequences are useful for c screening a human to diagnose a disorder affecting the brain or a genetic predisposition, specifically schizophrenia. nGPCRx are useful for identifying compounds useful for treating schizophrenia. Detection of c nGPCRx in a sample is useful as a diagnostic tool for diseases or disorders e.g. thyroid disorders, renal failure, rheumatoid arthritis, CNS disorders, infections such as HIV-1, metabolic and cardiovascular disorders, infections deform and hormonal disorders. Modulators of nGPCRx activity have the utility for treating neurological disorders, cincluding schizophrenia, ADHD/ADD (attention deficit disorder), and neuronal disorders such as Alzheimer's disease, prothics and certains of disorders such as Alzheimer's disease, prothics and certains and senile dementia. Additional disorders include inflammatory conditions (e.g. Crohn's concers), recommenders, cancers, cancers, respiratory allments such as asthma, and inflammatory diseases e.g.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    180

New human G-protein coupled receptor X, GPCRX, polypeptide useful in treatment or prevention of GPCRX associated disorders e.g. cardiomyopathy or atherosclerosis, and to screen for antagonists and agonists useful therapeutically agonists useful therapeutically

Claim 9; Page 7; 157pp; English.

The invention relates to nucleic acid sequences (ABAB1529-ABAB1552) that encode G-coupled protein-receptor related polypeptides

C (ABB4522-ABB4643). The isolated polypeptides

C (CPCRX) polypeptides. The polypeptides have potential cardiant.

C (CPCRX) polypeptides. The polypeptides have potential activity. The properties can be administered therapeutically, especially using gene therapy and expressing the encoding DNA in vivo, to treat or prevent cardiomyopathy, atherosclerosis, disorders can be used to treat/prevent cardiomyopathy, atherosclerosis, disorders can be used to also and metabolic pathway modulation (e.g. cobssity, anorexia), diabeters, osteoporosis, Crohn's disease, multiple cobssity, anorexia, disorders, neurodegenerative disorders, davaders, osteoporosis, Crohn's disease, multiple cobssity, anotozoal and viral infections (e.g. with human communication) protozoal and viral infections (e.g. with human communication in polypeptide expression levels relative to determine the presence of or predisposition to a disease associated with altered levels of the polypeptide expression levels relative to determine the presence of or predisposition to a disease associated with altered levels of the polypeptide expression levels relative to determine the presence of or predisposition to a disease associated with altered levels of the polypeptide expression levels relative to determine the presence of or predisposition to a disease associated with altered levels of the polypeptide expression and/or agents

C control samples. They are useful to identify agents binding polypeptide apparent to a disease assoc antagonists and agonists in disease treatment.

The isolated polypeptide having a sequence differing by no more than 15 % of amino acid residues from one of 22 amino acid sequences (or mature forms of the sequences), fully defined in the sequences (or mature forms of the sequences), fully defined in the sequences) produced to a corresponding to human G-protein coupled receptor X (GPGRX) polypeptides. The polypeptides have potential cardiant, antitarteriosclerotic, anabolic, cytostatic and antiviral activity. The

therapy and expressing the encoding DNA in vivo, to treat or prevent CC CPCRX-associated disorders, especially in humans. For example, they can be used to treat/prevent cardiomyopathy, atheroscierosis, disorders related to signal processing and metabolic pathway modulation (e.g. related to signal processing and metabolic pathway modulation (e.g. obesity, anorexia), diabetes, osteoporosis, Crohn's disease, multiple sclerosis, asthma, cancers, neurodegenerative disorders (e.g. Alzheimer's disease, parkinson's disorders, immune disorders, bacterial, fungal, protozoal and viral infections (e.g. with human immunodeficiency virus (HIV)-1 or HIV-2). They can be used diagnostically to detecting alterations in polypeptide in mammals (especially humans) by detecting alterations in polypeptide in mammals (especially humans) by detecting alterations in polypeptide expression levels relative to control samples. They are useful to identify agents binding polypeptide expression or activity, useful as metagonists and agonists in disease treatment.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           420

The invention relates to numan G-protein coupled receptor (GCKEC)

To polypeptides and polynucleotides. GCREC polypeptides are useful for screening compounds that modulate their activity. They are useful in the dagnosis, prevention and treatment of disorders which include cell proliferative disorders such as arteriosclerosis, hepatitis, myelofibrosis, psoriasis and cancer including adenocarcinoma, leukaemia, lymphoma; neurological disorders such as epilepsy, isochemic creebrovascular disease, Alzheimer's disease, Fick's disease, dementia, parkinson's disease, ataxias, multiple sclerosis, bacterial and viral mentiquits, Creutzfeldt-Jakob disease, schizophenic disorders, ammesia; cardiovascular disorders such as arteriovenous fistula, atherosclerosis, hypertension, vascular tumours, myocardial infarction, hypertensive cardiovascular disorders such as dysphagia, peptic osophagitis, gastrointestinal disorders such as dysphagia, peptic osophagitis, emesis, anorexia, nausea, peptic ulcer, cholelithiasis, diarrhoea, constipation, acquired immune deficiency syndrome (AIDS), hepptic encephalopathy; autoimmune/Ainflammatory disorders such as Addison's disease, allergies, spondylitis, amyloidosis, anaemia, asthma, contact dermatitis, Crohn's disease, diabetes mellitus, Goodpasture's syndrome, emphysema, Grave's disease, diabetes mellitus, Goodpasture's syndrome, emphysema, Grave's disease, gout, multiple sclerosis, rheumatoid arthritis, systemic lupus erythematosus, uveitis, viral, bacterial, fungal, parasitic, protozoal and helminthic infections and trauma; metabolic disorders such as diabetes, obesity and osteoporosis; and cadenovirus, annavirus, bunyavirus. Polynucleotides of the invention are useful as probes for assessing toxicity of test compounds. They are also used in gene therapy. The peptic sequence is human G-protein
                                                                                                                        Novel G-protein coupled receptors and polynucleotides useful for diagnosis, treatment and prevention of disorders of cell proliferation, neurological, cardiovascular, metabolic disorders and viral infections
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                240

The invention describes a novel isolated polynucleotide (I) encoding a human HM74-like GPCR are useful for modulating the activity of that regulate HM74-like GPCR are useful for modulating the activity of the regulate HM74-like GPCR are useful for modulating the activity of the protein in a disease selected from bacterial, fungal, protozoan, and viral infection, pain, cancer, anorexia, bulimia, asthma, central nervous system (CNS) disease, cardiovascular disease, hypotension, hypertension, angina pectoris, myocardial infarction, urinary retention, osteoporosis, ulcar, asthma, inflammation, allergy, benign prostatic hypertrophy, culer, asthma, inflammation, allergy, benign prostatic hypertrophy, culer, syndrome. The composition is also useful for treating psychotic and neurological disorders such as anxiety, schizophrenia, manic depression, delirium, dementia and severe mental retardation. (I) cor the HM74-like GPCR polypeptide are also useful for treating the above cor the HM74-like GPCR polypeptide are also useful for treating the above diseases, susceptibility to diseases and abnormalities related to the correct of mutations in the nucleic acid sequences which may act as agonists or antagonists at the receptor site and which can be regulated to provide therapeutic effects. The polypeptide is also useful as a bait correction in a two-hybrid or three-hybrid assay, and to immunise a mammal correct production of polyclonal antibodies. This sequence encodes the human correct correction of provide the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Novel isolated polynucleotide, useful for treating infection, pain, cancer, asthma, hypertension, myocardial infarction, urinary retention, osteoporosis, encodes the human HM74-like G-protein coupled receptor
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        643
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    180

The present invention relates to the isolation of a novel human G-protein coupled receptor (GPCR) which is related to the chemokine receptor coupled receptor (GPCR) which is related to the chemokine receptor (GPCR) which is related to the chemokine receptor (GPCR) which is sequences encoding for GPCR are also given in the invention. The sequences of the invention are useful conditions mediated by human proteases. Such diseases include hyperproliferative disorders (e.g. Parkinson's disease), (e.g. parkinson's disease), (e.g. diabetes) and respiratory disorders (e.g. parkinson's disease), (e.g. diabetes) and respiratory disorders (e.g. adult respiratory disorders) (e.g. diabetes) and respiratory disorders (e.g. adult respiratory disorders) (e.g. distress syndrome, ARDS). The GPCR protein is also useful for identifying adents for use in mammalian therapeutic applications, a human drug, particularly modulating a biological or pathological response in a cell or tissue that expresses the protein, in biological casays related to GPCRs that are related to members of the chemokine receptor subfamily, in drug screening assays and in competition binding assays. GPCR is also useful in diagnosing a disease or predisposition to a disease mediated by the peptide, in pharmacogenomic analysis. The polyucleotide sequences can also be used in gene therapy. The present condition is a parking the puman GPCR gene sequence of the invention.
                                                                                                                                                                                                                                                                                                                                                                        Novel human G-protein coupled receptor proteins and nucleic acid molecules encoding the protein for use in developing human therapeutics and diagnostic compositions and for identifying modulators of the protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         240
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 490
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   610

The invention relates to nucleic acid sequences (ABAB1529-ABAB152) that encode Groupled protein-receptor related polypeptides (ABB4522-ABB44543). The isolated polypeptide having a sequence differing by no more than 15 % of amino acid residues from one of 22 amino acid sequences (or mature forms of the sequences), fully defined in the sequences (or mature forms of the sequences), fully defined in the sequences (or mature forms of the sequences), fully defined in the sequences (or mature forms of the sequences), fully defined in the sequences (or mature forms of the sequences), fully defined in the compact of sequences (or properties and entities) that can be administered therapeutically, especially using gene therapy and expressing the encoding DNA in vivo, to treat or prevent credited disorders, especially in humans. For example, they can be used to treat/prevent cardiomyopathy, atherosclerosis, disorders credated to signal processing and metabolic pathway modulation (e.g. obesity, anorexia), diabetes, osteoporosis, Crohn's disease, multiple sclerosis, asthma, cancers, neurodegenerative disorders (e.g. Alzheimer's disease, Parkinson's disorder, Huntington's disease, neurological disorders, bacterial, fungal, protozoal and viral infections (e.g. with human (muniodeficiency virus (HTV)-1 or HTV-2). They can be used diagnostically immuned the presence of or predisposition to a disease associated with altered levels of the polypeptide expression levels especially humans) by detecting alterations in polypeptide expression levels elabeliae of control samples They are useful to identify agents binding polypeptide

The present invention relates to novel G protein-coupled receptors

(nGPCRx; where x is 1, 3, 4, 5, 9, 11, 12, 14-18, 20, 21, 22, 24, 27,

28, 31-38, 40, 41, 53-60) and their coding sequences. The present

c sequence is the coding sequence for one such G protein-coupled receptor.

GFCRs are also known as seven transmembrane receptors and function in

sequences are useful for

GFCRs are also known as seven transmembrane receptors and function in

c signal transduction. The nGPCRx coding sequences are useful for

c screening a human to diagnose a disorder affecting the brain or a genetic

c dentifying compounds useful for treating schizophrenia. Detection of

c nGFCRx in a sample is useful as a diagnostic tool for diseases or

c disorders e.g. thyroid disorders, renal failure, rheumatoid arthritis,

c disorders, infections such as HIV-1, metabolic and cardiovascular

c disorders, infections such as HIV-1, metabolic and cardiovascular

c disorders, infections such as and hormonal disorders, wodulators of

c nGPCRx activity have the utility for treating neurological disorders,

c nGPCRx activity have the utility for treating neurological disorders,

c nGPCRx activity have the utility for treating neurological disorders,

c nGPCRx activity have the utility for treating neurological disorders,

c nGPCRx activity have the utility for treating neurological disorders,

c nGPCRx activity have the utility for treating neurological disorders,

c disease, proliferation deficit disorder, and neuronal disorders such as

Additional disorders include inflammatory conditions (e.g. Crohn's

c disease), rheumatoid arthritis, autoimmune disorders, cancers,

c negpliatory allments such as asthma, and inflammatory diseases e.g.

inflammatory bowel disease.
                                                                      signal transduction; schizophrenia, thyroid disorder; renal failure, rheumatoid arthritis; CNS disorder; infection; metabolic disease; cardiovascular disease; proliferative disorder; hormonal disorder; neurological disorder; neurological disorder; neurological disorder; partention deficit-hyperactivity disorder/attention deficit disorder; parkinson's disease; migraine; senile dementia; inflammatory disease; rheumatoid arthritis; autolmmune disorder; respiratory ailment;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ₹.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New G protein-coupled receptor (nGPCR-x) and its encoding polynucleotide useful for diagnosing and treating e.g. schizophrenia

hRUP25. The endogenous and non-endogenous, constitutively activated versions of human G-protein coupled receptors (GPCR), are useful for direct identification of candidate compounds as receptor agonists, inverse agonists or partial agonists having applicability as therapeutic agents for treating diseases related to GPCR, e.g. lung cancer. Non-endogenous version of human GPCRs are also utilized in research settings and in vitro and in vivo system, incorporating GPCRs can be utilised to elucidate and understand the roles these receptors play in the human condition, both normal and diseased.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Endogenous and non-endogenous versions of human G-protein coupled receptors for direct identification of candidate compounds as agonists, inverse agonists or partial agonists for use as therapeutic agents -

The invention relates to constitutively active, non-endogenous versions of endogenous human orphan G protein-coupled receptors (GPCRs, AAY90663-AAY90683-Y90687), and to DNA encoding them (AAA30709-A30743 and AAAA30779-A30779). The mutant proteins of the invention contain a mutation in a portion of the protein comprising intracellular loop 3 (IC3) and transmembrane domain 6 (TM6). A non-endogenous amino acid, X, is substituted for an endogenous residue in IC3 at a position 16 amino acids N-terminal of an endogenous proline in TW6 to form a sequence X-(AA)15-pro. The endogenous amino acid is selected from Lys, His, Arg or Ala, and is preferably Lys. When the endogenous residue at this position is Lys, this residue is replaced by His, Arg or preferably Ala. The 15 amino acid stratch between the substituted amino acid and the Promay be endogenous, non-endogenous, or a mixture of endogenous and non-endogenous, or a mixture of endogenous and non-endogenous, non-endogenous, or a mixture of endogenous and non-endogenous residues. The constitutively active GPCRs are useful for identifying antagonists, agonists and partial agonists for use as pharmaceutical agents. The mutant proteins are also useful in research and account of the receptors in normal and account of the receptors in ormal account of the receptors in ormal and account of the receptors in ormal and account of the receptors in ormal account of the receptors and account of the receptors and account of the receptors and account of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              diseased conditions. Antagonists for a particular GPCR are useful for treating diseases and disorders associated with that receptor. Because the novel mutant GPCRs are constitutively active, they can be used directly for screening of compounds without the need for endogenous ligands. The present sequence represents cDNA encoding a human wild-type GPCR used in an exemplification of the invention. This was cloned and subjected to site-directed mutagenesis (SDM) to generate DNA encoding
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Non-endogenous constitutively activated human G protein-coupled receptors, useful for identifying agonists for use as pharmaceutical
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            G protein-coupled receptor; GPCR; constitutively active;

The invention relates to constitutively active, non-endogenous versions of endogenous human orphan G protein-coupled receptors (GPCRs, AAY90643-AAY90677 and AAAY90677 and AAAY90677 and AAAY90677 and AAAY9079). The mutant proteins of the invention contain a mutation in a portion of the protein comprising intracellular loop 3 (TS3) and transmembrane domain 6 (TM6). A non-endogenous amino acid, x, is substituted for an endogenous proline in IC3 at a position 16 amino acids N-terminal of an endogenous proline in TM6 to form a sequence X (AAA)15-pro. The endogenous amino acid is selected from Lys, His, Arg or Ala, and is preferably Lys. When the endogenous residue at this position is Lys, this residue is replaced by His, Arg or preferably Ala. The IS amino acid stretch between the substituted and the Promay be endogenous, non-endogenous, or a mixture of endogenous and non-endogenous. The constitutively active GPCRs are useful for identifying antagonists, agonists and partial agonists for use as cettings for elucidating the roles of the receptors in normal and settings for elucidating the roles of the receptors in normal and consequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       treating diseases and disorders associated with that receptor. Because the novel mutant GPCRs are constitutively active, they can be used directly for screening of compounds without the need for endogenous ligands. Sequences AAA30709- AAA30743 and AAA30775-A30779 represent DNAs
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Non-endogenous constitutively activated human G protein-coupled receptors, useful for identifying agonists for use as pharmaceutical
                                                                                                                                                                                                                                                        DNA encoding human mutant G protein-coupled receptor HM74 (1230K).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ő

                                                             The present sequence encodes a member of the G-protein coupled receptor (7TM receptor) family, designated the HM74A receptor. The proteins, agonists, antagonists and polynucleotides can be used for treating disorders associated with increased or reduced expression or activity of insorders associated with increased or reduced expression or activity of HM74A, e.g. bacterial, fungal, protozoan and viral infections, particularly infections caused by HW-1 or HW-2, pain, cancers, diabetes, obesity, anorexia, bulimia, asthma, Parkinson's disease, actue heart failure, hypotension, hypertension, urinary retention, osteoporosis, angina pectoris, myocardial infarction, stroke, ulcers, asthma, allergies, benign prostatic hypertrophy, migraine, vomiting, psychotic and neurological disorders, including anxiety, schizophrenia, mand depression, debression, delirium, dementia, and severe mental retardation, and dyskinesias such as Huntington's disease or cliles de la Tourett's syndrome. The products can also be used for detection, diagnosis and drug screening.
                                                                                                                                                                                                                         HM74A receptor; G-protein coupled receptor; infection; pain; cancer; diabetes; obesity; neurological disorder; heart failure; hypertension;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New isolated G-protein coupled receptor, HM74A - used to develop products for treating e.g. infections, pain, cancers, diabetes, obesity, neurological disorders, heart failure, hypertension, asthma

The present invention relates to novel G protein-coupled receptors (nGPCRX; where x is 1, 3, 4, 5, 9, 11, 12, 14-18, 20, 21, 22, 24, 27, 28, 31-38, 40, 41, 57-60) and their coding sequences (see AAH50049-AAH51015 and AAAG80929-AAG80975 and AAG80977. The present sequence is an oligonucleotide, which was used in the present invention. GPCRs are also known as seven transmembrane receptors and function in signal transduction. The nGPCRx coding sequences are useful conscreening a human to diagnose a disorder affecting the brain or a genetic predisposition, specifically schizophrenia. nGPCRx are useful for identifying compounds useful for treating schizophrenia. Detection of nGPCRx in a sample is useful as a diagnostic tool for diseases or disorders e.g. thyroid disorders. renal failure, rheumatoid arthitis, CNS disorders, infections such as HIV-1, metabolic and cardiovascular diseases, proliferative disorders and hormonal disorders. Modulators of
G protein-coupled receptor; nGPCR; seven transmembrane receptor; signal transduction; schizophrania; thyroid disorder; renal failure; rheumatoid arthritis; CNS disorder; infection; metabolic disease; cardiovascular disease; proliferative disorder; hormonal disorder; neurological disorder; neuronal disorder; Alzheimer's disease; cancer; attention deficit-hyperactivity disorder/attention deficit disorder; parkinson's disease; migraine; senile dementia; inflammatory disease; rheumatoid arthritis; autoimmune disorder; respiratory ailment;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Parodi LA, Hiebsch RR, Lind P, Slightom J;

New G protein-coupled receptor (nGPCR-x) and its encoding

```
The present invention relates to novel G protein-coupled receptors (nGPCRx; where x is 1, 3, 4, 5, 9, 11, 12, 14-18, 20, 21, 22, 24, 27, 28, 31-38, 40, 41, 53-60) and their coding sequences (see 28, 31-38, 40, 41, 53-60) and their coding sequences (see present sequence is a PCR primer, which was used in an example from the present invention GPCRs are also known as seven transmembrane receptors and function in signal transduction. The nGPCRx coding sequences are useful for screening a human to diagnose a disorder affecting the brain or a genetic predisposition, specifically schizophrenia. nGPCRx are useful for Identifying compounds useful for treating schizophrenia.

Or a genetic predisposition, specifically schizophrenia nGPCRx in a sample is useful as a diagnostic tool for diseases or disorders e.g. thyroid disorders, renal failure, rheumatoid arthritis, CNS disorders, proliferative disorders and hormonal disorders. Modulators of nGPCRx activity have the utility for treating neurological disorders, including schizophrenia, ADHD/ADD (attention deficit-disorders, including schizophrenia, ADHD/ADD (attention deficit-disorders, such as Alzheimer's disease, magraine and carcing dementia, additional disorders include inflammatory conditions
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ö

                                                                                                                                                                                                                                                                                                                                                                                                                present sequence is an oligonucleotide, which was used in the present invention. GPCRs are also known as seven transmembrane receptors and invention in signal transduction. The indeptx coding sequences are useful for screening a human to diagnose a disorder affecting the brain or a genetic predisposition, specifically schizophrenia. nGPCRx are useful for identifying compounds useful for treating schizophrenia. Detection of inclentifying compounds useful for treating schizophrenia. Detection of disorders e.g. thyroid disorders, renal failure, rheumatoid arthritis, CNS disorders, infections such as HIV-1, metabolic and cardiovascular disorders, infections such as HIV-1, metabolic and cardiovascular including schizophrenia, ADHD/ADD (attention deficit-hyperactivity including schizophrenia, ADHD/ADD (attention deficit-hyperactivity disorders parkinson's disease, migraine and senile dementia. Additional disorders include inflammatory conditions (e.g. Crohn's disease), rheumatoid arthritis, autoimmune disorders, cancers,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö
                                                                                                                                                                                                                                                                                                                                                      The present invention relates to novel G protein-coupled receptors (nGPCRX; where x is 1, 3, 4, 5, 9, 11, 12, 14-18, 20, 21, 22, 24, 27, 28, 31-38, 40, 41, 53-60) and their coding sequences (see AAH50059-AAH51015 and AAH51105 and AAG80929-AAG80975 and AAG80977). The
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               G protein-coupled receptor; nGPCR; seven transmembrane receptor; signal transduction; achizophrania; hyproid disorder; renal failure; rhematoid arthritis; CNS disorder; infection; metabolic disease; cardiovascular disease; proliferative disorder; hormonal disorder; neuronal disorder; attention deficit-hyperactivity disorder/attention deficit disorder; parklnson's disease; mancer; parklnson's disease; magraine; senile dementia; inflammatory disease;

The present invention relates to novel G protein-coupled receptors (nGPCRx; where x is 1, 3, 4, 5, 9, 11, 12, 14-18, 20, 21, 22, 24, 27, 28, 31-38, 40, 41, 53-60) and their coding sequences (see 28, 31-38, 40, 41, 53-60) and their coding sequences (see AAH51015 and AAH51059-AAG80975 and AAG80977). The present sequence is a PCR primer, which was used in an example from the present invention. GPCRs are also known as seven transmembrane receptors and function in signal transduction. The nGPCRx coding sequences are useful for screening a human to diagnose a disorder affecting the brain or a genetic predisposition, specifically schizophrenia. nGPCRx are useful for identifying compounds useful for treating schizophrenia.

Or a genetic predisposition, specifically schizophrenia chickenses or disorders e.g. thyroid disorders, renal failure, rheumatoid arthritis, CNS disorders, proliferative disorders and hormonal disorders. Modulators of nGPCRx activity have the utility for treating neurological disorders including schizophrenia, AAHD/ADD (attention deficit-chiperactivity disorder/attention deficit disorders und neuronal disorders such as Alzheimer's disease, Parkinson's disease, migraine and cannot be an additional disorders includers and processes an expense of the conditions and disorders includers and disorders includers and an enronal disorders and demential disorders includers and disorders includers and hormonal disorders and demential disorders includers and hormonal disorders includers and hormonal disorders and hormonal disorders includers and hormonal disorders and the demential disorders includers and hormonal disorders and the demential disorders includers and distince and disorders and hormonal disorders and the demential disorders and disparse and d
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   (e.g. Crohn's disease), rheumatoid arthritis, autoimmune disorders,
cancers, respiratory ailments such as asthma, and inflammatory diseases

                                                                                                                                                                                                                                                                                  q
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              present sequence is a PCR primer, which was used in an example from the present invention. GPCRs are also known as seven transmembrane receptors and function in signal transduction. The nGPCRx coding sequences are useful for screening a human to diagnose a disorder affecting the brain or a genetic predisposition, specifically schizophrenia. nGPCRx are useful for identifying compounds useful for treating schizophrenia. Detection of nGPCRx in a sample is useful as a diagnostic tool for althritis, CNS disorders, infections such as HIV-I, metabolic and cardiovascular diseases, proliferative disorders and hormonal disorders. Modulators of nGPCRx activity have the utility for treating neurological
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            (nGPCRx; where x is 1, 3, 4, 5, 9, 11, 12, 14-18, 20, 21, 22, 24, 27, 28, 31-38, 40, 41, 53-60) and their coding sequences (see AAH51015 and AAH51105 and AAG80929-AAG80975 and AAG80977).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                셤
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present invention relates to novel G protein-coupled receptors

(nGPCRx; where x is 1, 3, 4, 5, 9, 11, 12, 14-18, 20, 21, 22, 24, 27,

28, 31-38, 40, 41, 53-60) and their coding sequences (see
ANH50869-AAH51015 and AAH5105 and AAG80929-AAG80975 and AAG80977). The
present sequence is a PCR primer, which was used in an example from the
present invention. GPCRs are also known as seven transmembrane receptors
and function in signal transduction. The nGPCRx coding sequences are
useful for screening a human to diagnose a disorder affecting the brain
cor a genetic predisposition, specifically schizophrenia. nGPCRx are
useful for identifying compounds useful for treating schizophrenia.

Cor a genetic conferex in a sample is useful as a diagnostic tool for
the preses or disorders e.g. thyroid disorders, renal failure, rheumatoid
arthritis, CNS disorders, infections such as HIV1, metabolic and
cardiovascular diseases, proliferative disorders and hormonal disorders.

Modulators of nGPCRx activity have the utility for treating neurological
disorders, including schizophrenia, AHDADD (attention deficit.
hyperactivity disorder/attention deficit disorder, and neuronal
cardiovascular disease, proliferative disorder, and neuronal
disorders such as Alzheimer's disease, Parkinson's disease, migraine and
senie dementia. Additional disorders include inflammatory conditions
cancers, respiratory ailments such as asthma, and inflammatory diseases
e.g. inflammatory bowel disease.

The present invention relates to novel G protein-coupled receptors (nGPCRx; where x is 1, 3, 4, 5, 9, 11, 12, 14-18, 20, 21, 22, 24, 27, 28, 31-38, 40, 41,53-60) and their coding sequences (see 28, 31-38, 40, 44)5105 and their coding sequences (see present sequence is a PCR primer, which was used in an example from the present sequence is a PCR primer, which was used in an example from the present invention. GPCRs are also known as seven transmembrane receptors and function in signal transduction. The nGPCRx coding sequences are useful for screening a thran to diagnose a disorder affecting the brain or a genetic predisposition, specifically schizophrenia. nGPCRx are useful for identifying compounds useful for treating schizophrenia.

Or a genetic predisposition, specifically schizophrenia checking the brain or nGPCRx in a sample is useful a a diagnostic tool for diseases or disorders e.g. thyroid disorders, renal failure, rheumatoid arthitis, CRS disperser; infections such as HIV1, metabolic and cardiovascular diseases, proliferative disorders and hormonal disorders. Modulators of nGPCRx activity have the utility for treating neurological disorders, including schizophrenia, ADHD/ADD (attention deficit-disorders, understance and neuronal disorders such as Alzheimer's disease, Parkinson's disease, migraine and senile demential disorders includes and neuronal disorders includes employed the inclusions of senile demential disorders includes and neuronal disorders includes employed the inclusions and neuronal disorders includes and an entities are a protein and present and an entity of the present and pr
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             (e.g. Crohn's disease), rheumatoid arthritis, autoimmune disorders, cancers, respiratoja valuents such as asthma, and inflammatory diseases e.g. inflammatory bowel disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 G protein-coupled receptor; nGPCR; seven transmembrane receptor; signal transduction; schizophrenia; thyroid disorder; renal failure; rheumatoid arthritis; CNS disorder; infection; metabolic disease; cardiovascular disease; proliferative disorder; hormonal disorder; neurological disorder; neurological disorder; neurol defibit hyperactivity disorder; Alzheimer's disease; cancer; attention defibit disorder; Parkinson's disease; migraine; senile dementia; inflammatory disease; rheumatoid arthritis; autoimmune disorder; respiratory ailment;

AAH51051,
                                                                     The present invention relates to novel G protein-coupled receptors

(nGPCRX: where x is 1, 3, 4, 5, 9, 11, 12, 14-18, 20, 21, 22, 24, 27,
28, 31-38, 40, 41, 53-60) and their coding sequences (see
28, 31-38, 40, 41, 53-60) and their coding sequences (see
present sequence is a PCR primer, which was used in an example from the
present invention. GPCRs are also known as seven transmembrane receptors
and function in signal transduction. The nGPCRx coding sequences are
useful for screening a human to diagnose a disorder affecting the brain
or a genetic predisposition, specifically schizophrenia. nGPCRx are
useful for identifying compounds useful for treating schizophrenia.
Detection of nGPCRx in a sample is useful as a diagnostic tool for
diseases or disorders e.g. thyroid disorders, renal failure, rheumatoid
arthritis, CNS disorders, infections such as HIV1, metabolic and
cardiovascular diseases, proliferative disorders and hormonal disorders.
Modulators of nGPCRx activity have the utility for treating neurological
disorders und schizophrenia, ADHD/ADD (attention deficit-
disorders such as Alzheimer's disease, Parkinson's disease, migraine and
senile dementia. Additional disorders include inflammatory conditions
(e.g. Crohn's disease), rheumatoid arthritis, autoimmune disorders,
cancers, respiratory aliments such as asthma, and inflammatory diseases
e.g. inflammatory disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Parodi LA, Hiebsch RR, Lind P, Slightom J;

present sequence is an oligonouteotide, which was used in the present invention. GPCRs are also known as seven transmembrane receptors and invention. GPCRs are also known as seven transmembrane receptors and function in signal transduction. The nGPCRx coding sequences are useful for screening a human to diagnose a disorder affecting the brain or a genetic predisposition, specifically schizophrenia. nGPCRx are useful for identifying compounds useful for treating schizophrenia. Detection of disorders e.g. thyroid disorders, renal failure, rheumatoid arthritis, CNS disorders, infections such as HIV-1, metabolic and cardiovascular diseases, proliferative disorders and hormonal disorders. Modulators of nGPCRx activity have the utility for treating neurological disorders, including schizophrenia, ADHD/ADD (attention deficit-hyperactivity
                                                                                                                                                                                                                                                                                                                                                                                                                         The present invention relates to novel G protein-coupled receptors (nGPCRX; where x is 1, 3, 4, 5, 9, 11, 12, 1418, 20, 21, 22, 24, 27, 28, 31-38, 40, 41, 53-60) and their coding sequences (see AAHS1015 and AAHS1105 and AAG80929-AAG80975 and AAG80977). The
                                                                                                                   New G protein-coupled receptor (nGPCR-x) and its encoding polynucleotide useful for diagnosing and treating e.g. schizophrenia
                                                                                                                                                                                                                                                                                                      Disclosure; Page 245; 261pp; English.

The present invention relates to novel G protein-coupled receptors

(nGPCRx; where x is 1, 3, 4, 5, 9, 11, 12, 14-18, 20, 21, 22, 24, 27,

(28, 31-38, 40, 41, 53-60) and their coding sequences (see

28, 31-38, 40, 41, 53-60) and their coding sequences (see

present sequence is a PCR primer, which was used in an example from the

present invention. GPCRs are also known as seven transmembrane receptors

and function in signal transduction. The nGPCRx coding sequences are

useful for screening a human to diagnose a disorder affecting the brain

or a genetic predisposition, specifically schizophrenia. nGPCRx are

useful for identifying compounds useful for treating schizophrenia.

Detection of nGPCRx in a sample is useful as a diagnostic tool for

disposases or disorders e.g. thyroid disorders, renal failure, rheumatoid

ardiovascular diseases, proliferative disorders and hormonal disorders.

Modulators of nGPCRx activity have the utility for treating neurological

disorders uch as Alzheimer's disease, Parkinson's disease, migraine and

senila dementia. Additional disorders, including schizophrenia, ADHD/ADD (attention deficit

hyperactivity disorder/attention deficit disorder, and neuronal

disorders such as Alzheimer's disease, parkinson's disease, migraine and

senila dementia. Additional disorders including inflammatory conditions

(e.g. Crohn's disease), rheumatoid arthritis, autoimmune disorders,

cancers, respiratory allments such as asthma, and inflammatory diseases
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         G protein-coupled receptor; nGPCR; seven transmembrane receptor; signal transduction; schizophrenia; thyroid disorder; renal failure; rheumatoid arthritis; CNS disorder; infection; metabolic disease; cardiovascular disease; proliferative disorder; hormonal disorder; neurological disorder; neuronal disorder; Alzheimer's disease; cancer; attention deficit hyperactivity disorder/attention deficit disorder; Parkinson's disease; migraine; senile dementia; inflammatory disease; rheumatoid arthritis; autoimmune disorder; respiratory ailment;

                                                                                                                                                                                                                                                                       20-APR-2000
                                                                 25-MAY-2001
     The present invention relates to novel G protein-coupled receptors (GPCRX: where x is 1, 3, 4, 5, 9, 11, 12, 14-18, 20, 21, 22, 24, 27, 28, 31-38, 40, 41, 53-60) and their coding sequences (see AAH50968-AAH51015 and AAH51015 and AAG80929-AAG80975 and AAG80977). The present sequence is an oligonucleotide, which was used in the present invention. GPCRs are also known as seven transmembrane receptors and function in signal transduction. The nGPCRx coding sequences are useful for screening a human to diagnose a disorder affecting the brain or a genetic predisposition, specifically schizophrenia. nGPCRx are useful for identifying compounds useful for treating schizophrenia. Detection of nGPCRx in a sample is useful for treating schizophrenia. Detection of nGPCRx in sample is useful as a diagnostic tool for diseases or disorders infections such as HIV-1, metabolic and cardiovascular diseases, proliferative disorders, and hormonal disorders. Modulators of nGPCRx activity have the utility for treating neurological disorders, include inflammatory conditions (e.g. Crohn's disease), rheumatoid efficit disorder) conditions (e.g. Crohn's disease), rheumatoid arthritis, autoimmune disorders, cancers, respiratory aliments such as asthma, and inflammatory diseases e.g.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                hyperactivity disorder/attention deficit disorder), and neuronal disorders such as Alzheimer's disease, Parkinson's disease, migraine and senile dementia. Additional disorders include inflammatory conditions (e.g. Crohn's disease), rheumatoid arthritis, autoimmune disorders, cancers, respiratory allments auch as asthma, and inflammatory diseases e.g. inflammatory bowel disease.
                                                                                                                                                                                                               The present invention relates to novel G protein-coupled receptors (nGPCRx; where x is 1, 3, 4, 5, 9, 11, 12, 14-18, 20, 21, 22, 24, 27, 28, 31-38, 40, 41, 53-60) and their coding sequences (see AAH51045 and AAH51115 and AAH51115 and AAH51105 and AAG80975 and AAG80977). The present sequence is a PCR primer, which was used in an example from the present invention. GPCRs are also known as seven transmembrane receptors
                                                                                                                                                                                                                                                                                                                                                                                                                                                                  and function in signal transduction. The nGPCRx coding sequences are useful for screening a human to diagnose a disorder affecting the brain or a genetic predisposition, specifically schizophrenia. nGPCRx are useful for identifying compounds useful for treating schizophrenia. Detection of nGPCRx in a sample is useful as a diagnostic tool for diseases or disorders e.g. thyroid disorders, renal failure, rheumatoid arthitis, CNS disorders, infections such as HIV-1, metabolic and cardiovascular diseases, proliferative disorders and hormonal disorders. Modulators of nGPCRx activity have the utility for treating neurological disorders, including schizophrenia, ADHD/ADD (attention deficit-
New G protein-coupled receptor (nGPCR-x) and its encoding polynucleotide useful for diagnosing and treating e.g. schlzophrenia
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ;

capable of detecting 1000 or more genes from prosophila. The invention is useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABLiG176-ABL3051), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins
                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                       New isolated nucleic acid detection reagent for detecting 1000 or more genes from Drosophila and for elucidating cell signalling and cell-cell
                                                                                                                                                                                                                                                                                                                                                   The invention relates to an isolated nucleic acid detection reagent
                                                                                                                                                                                                                                                                                                                  claim 1; SEQ ID NO 2656; 21pp + Sequence Listing; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sequence 912 BP; 265 A; 188 C; 225 G; 234 T; 0 other;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö
                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to novel genes (AAL34669-AAL37666) and proteins (ABB3087-ABB04109) associated with the musculoskeletal system useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. The genes are isolated from a range of human tissues disclosed in the specification. The nucleic acids, proteins, antibodies and (anti-agonists are useful in the diagnosis, treatment and prevention of: (a) cancer, e.g. breast and ovarian cancer and other cancers of the adrenal gland, bone, bone marrow, breast, gastrointestinal tract, lung, or urogenital; (b) immune consenses e.g. Addison's disease, allergies, autoimmune haemolytic anaemia, autoimmune thyroiditis, diabetes mellitus, Crohn's disease, multiple solerosis, rheumatoid arthritis and ulcerative colitis; (c) cardiovascular disorders such as myocardial ischaemias; (d) wound healing; (e) neurological diseases e.g. cerebral anoxia and epilepsy; and (f) infectious diseases such as viral, bacterial, fungal and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   and (f) infectious diseases such as viral, backers..., parasitic infections.

Parasitic infections.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.Wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps
                                                                                                                                                                                                                                                                                                                                Isolated polypeptide for treating, preventing and/ or prognosing disorders related to the musculoskeletal system including musculoskeletal cancers and also for testing and detection e.g.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Drosophila; developmental biology; cell signalling; insecticide; pharmaceutical; gene; ds.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö

                                                                                                                                                                                     ŏ
                                                                                                                                                                                                                                                                                                   ö
                                                                                                                          The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention is useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABLiol76-ABL30511), expressed DNA sequences (ABL16176-ABL30511), expressed DNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
New isolated nucleic acid detection reagent for detecting 1000 or more genes from Drosophila and for elucidating cell signalling and cell-cell
                                                                                                                                                                                                                     The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABLLG176-ABL30511), expressed DNA sequences (ABLG176-ABL30511), expressed DNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ö

The present sequence is that of genomic DNA encoding novel human low density lipoprotein binding protein 1 (LBP-1, see AAB82802).

Conversity lipoprotein binding protein 1 (LBP-1, see AAB82802).

Convention that encode novel polypeptides, termed spans 4 exons. Human LBP-1 nucleic acids are among claimed polynucleotides of the convention that encode novel polypeptides, termed LBPs, capable of binding to native and methylated LDL. Also claimed are isolated LBP polypeptides, and biologically active fragments and analogues of them, as well as expression vectors, cells and methods of producing the LBPs. Methods of determining if an animal is at risk for atherosclerosis, methods for evaluating an agent for use in abnormality in structure or metabolism of LBP are claimed. Pharmaceutical compositions comprising an LBP polypeptide or nucleic acid, and vaccine compositions, are also claimed.
New isolated low density lipoprotein binding polypeptide for treating, diagnosing and/or identifying therapeutic agents for atherosclerosis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequence 12619 BP; 3743 A; 2541 C; 2359 G; 3976 T; 0 other;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention is useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL016175) and the encoded proteins
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wlpo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New isolated nucleic acid detection reagent for detecting 1000 or more genes from Drosophila and for elucidating cell signalling and cell-cell interactions \cdot

                                     This nucleotide sequence encodes the 5' portion of the C195_1 protein which was isolated from a human PBMC CDNA library. The products of the polynucleotides of the invention can be used in research, detection and therapy, as they may have nutritional activity, cytokine and cell prollferation/differentiation activity. A search against the Genbank database demonstrated that this sequence has at least some homology with two ESTs identified as "ygl1906.rl Homo sapiens CDNA clone 19937 5'" and "yml5f12.rl Homo sapiens CDNA clone 48025 5'".
